

Conservation Activity Plan

Spill Prevention, Control, and Countermeasure

December 2011

Spill Prevention, Control, and Countermeasure

A spill prevention, control, and countermeasure conservation activity plan is a site-specific strategy for a landowner to manage 10,000 gallons or more of liquid storage capacity. Using this plan, landowners can meet Environmental Protection Agency regulations in the secondary containment of oil or oil products, such as diesel fuel, gasoline, lube oil, and crop oil.

NRCS Technical Service Providers (TSPs) prepare these plans using inputs such as:

- Oil spill predictions
- Types of oil and capacity of containers
- Evaluations of facility drainage

- Assessments of site security
- Assessments of bulk storage container compliance
- Analyses of transfer procedures and piping
- Assessments of secondary containment

Conservation practices recommended in such a plan can include:

- Agricultural secondary containment facilities
- Pond sealing or lining
- Dikes
